

## MadLib Learning Worksheet

char story[256][32];

Maximum number of words: \_\_\_\_\_

Maximum size of each word: \_\_\_\_\_

Fill in the first 10 elements of the array

story[0]	
story[1]	
story[2]	
story[3]	
story[4]	
story[5]	
story[6]	
story[7]	
story[8]	
story[9]	

numWords = \_\_\_\_\_

How to determine if the 2<sup>nd</sup> word is a tag (starting with a '<')

How would you replace story[5] with input from the user using getline?

Syntax of getline: cin.getline(<char array>, <max size>);

How would you loop through each word in the array and print it out?

How would you pass the 4<sup>th</sup> element from the story array into a function?

```
bool isQuestion(                )
{
    ...
}
```

```
Int main()
{
    Char story[256][32];
    Bool result = isQuestion(story[3]);
    ...
}
```
